                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The present invention relates to a method for producing L-arginine in a microorganism (e.g. coryneform bacteria) that has L-arginine producing ability and has been modified for enhanced expression of the lysE gene. The microorganism is also modified so that an arginine repressor (argR) does not function normally. The method of the invention is useful for the enhanced production of L-arginine which is useful in liver function promoting agents, amino acid influsion and comprehensive amino acid pharmaceuticals. The present sequence represents a DNA fragment
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             1016 Argercarcargaaarcrrcarracagercrecrrrregegeccagrcrrracrercc 1075
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              A microorganism comprising enhanced expression of the lysE gene is useful for enhanced production of L-arginine.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          containing Corynebacterium glutamicum LysG and LysE genes. Note: The present sequence is given as SEQ ID No:24 in the Sequence Listing but is referred to as SEQ ID No:25 in the rest of the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                           L-arginine production, coryneform bacteria, lyBE, arginine repressor, argR; liver function promoting agent, amino acid infusion, amino acid pharmaceutical; LysG, ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               1 ATGGTGATCATGGAAATCTTCATTACAGGTCTGCTTTTTGGGGGCCAGTCTTTTACTGTCC

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             180
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              240
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         420
                                                                                     The present inventions provided a number of the seequence from the CoryneCorm bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of corpneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, corpneform bacteria are useful for producing amino acids, nucleic acids, vitamins, asccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ATCGGACCGCAGAATGTACTGGTGATTAAACAAGGAATTAAGCGCGAAGGACTCATTGCG 120

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, coryneform bacteria are useful for producing amino particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the Buropean Patent Office
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       61 AICGGACCGCAGAATGTACTGGTGATTAAACAAGGAATTAAGGGCGAAGGACTCATTGCG 120

The present invention relates to DNA encoding variants of protein with loop region and six hydrophobic helixes which facilitates excretion of L-lysine and/or L-arginine to outside of cell of a methanol assimilating bacterium when introduced into the bacterium. The method is used for both of these L-amino acids to outside of a cell of a methanol assimilating bacterium when DNA of the method is introduced into the bacterium. The present sequence represents a lysE24 protein from bacterium lactofermentum encoding sequence. (Updated on 27-OCT-2003 to standardise OS field)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        099

The amino acid excretion protein produced from this gene is involved in the production of amino acids, and an increase in its expression leads to an increased accumulation of amino acids in the cell.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           In this case, an increase in arginine, glutamic acid and lygine is achieved if multiple copies of the gene are transfected into a bacterium. The bacterium used is E. coli
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  78
                                                                                                           099

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  957
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The invention relates to a gene from a high temperature-resistant coryneform microbe that encodes a heat-resistant lysin biosynthetic coryne. The enzyme has aspartete-semialdehyde dehydrogenase activity and can be used for growing amino acid-producing microbes. The present sequence encodes an enzyme of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 301 CCACAGATCATTGAAGAAACAGAACCAACGTGCCCGATGACACGCCTTTGGGCGGTTCG

BCGdelta2. A specific genetic deletion of this region results in an
avirulence phenotype of the mycobacterium. 2 other deletion regions (see
AAT3355 and AAT3357) have also been detected. Identification involved
screening a BCG cosmid library with a radiolabeled probe obtained
screening DBCG cosmid library with a radiolabeled probe obtained
screening DBCG cosmid library with a radiolabeled probe obtained
following DNA subtraction between virulent Mycobacterium tuberculosis
H37Rv and avirulent BCG. The deletions provide useful markers for the
identification of an avirulence requires the detection of the presence or
absence of the deletion; the deletions are detected either by detecting
the presence or absence of deletion junctions (see AAT33538-46), or by
detecting the presence or absence of the sequences contained within the
deletion. Deletion polypeptides are used as components of immunological
assays and in vaccines. (Updated on 16-OCT-2003 to standardise OS field)

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         610
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     This invention relates to a novel method for identifying essential genes for survival or virulence of mycobacteria species. The method comprises aligning the genomic sequence of a first mycobacterium species on a genomic sequence of a second mycobacterium species and selecting a polynucleotide sequence that is highly conserved in both genomes with no
                                                                                                                                                                                                                                                                                                                                    490

counterparts in other bacterial genomic sequences and that corresponds to an essential gene for the survival or virulence of mycobacterium species. The method of the invention is useful for detecting M. tuberculosis or M. leprae infection. The method reduces the number of potential new targets and protective antigens for new drugs and vaccine compositions to treat and prevent mycobacterial diseases, particularly tuberculosis and leprosy. The present sequence represents a Mycobacterial cosmid DNA sequence used in the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                       Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
